PIVOT DRIVER

New Revolutionary Technology

Powerful screwdriver with pivoting 4 position head to

**ACCESS
ALL AREAS**

BLACK & DECKER®

The new Black & Decker Pivot Driver™ can reach screws in hard-to-reach areas that other powered screwdrivers can not: it's compact design and unique pivoting head rotates into 4 positions to give ultimate access to tight corners and gets right up to the edge of ceilings, floors, cupboards, shelves etc.

PP360 - Pivot Driver

4 Position pivoting head
4.8V power
4Nm Torque (driving power)
On-board work light
180RPM
Forward / Reverse

In its central position, this powerful 4.8V screwdriver can complete everyday screwdriving tasks with ease. 4Nm of torque means it has the power to do more demanding screwdriver projects. To reach screws in the most difficult places, such as tight corners, simply rotate the screwdriving head into one of 3 'offset' positions: top, left and right of centre.

- Pivot the head to the top position for reaching close to ceilings and shelving etc.
- Pivot the head to the left position to get close to left edges, corners and cupboards etc.
- Pivot the head to the right position to get close to right edges, walls and corners etc.
- Pivot the head into the central position for normal screwdriving.

In all 4 positions there is an on-board light to illuminate darker working areas.

Compact counter-top charging cradle with 10 screwdriver bits conveniently stored on board.

Practical + robust storage case keeps everything in one place.

Pivot Driver™

Other Screwdrivers

The Pivot Driver™ can access screws that other powered screwdrivers can't reach
